

Southco AV Monitor Mounts

Southco Monitor Mounts allow for the intuitive and ergonomic positioning of displays.

They are available in a range of options, from simple tilt or pan devices to mount arms that allow you to manipulate the display into multiple axes with ease.

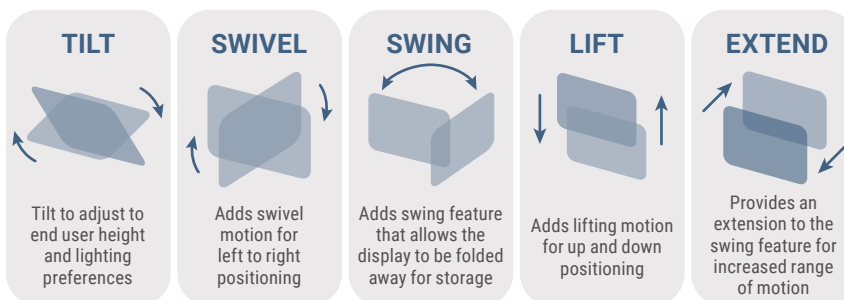

Suitable for displays, monitors or touchscreens, these Monitor Mounts also offer a unique feature by remaining in the position they were left in by the user, without the need for additional levers or clamps.

Key benefits

- No need for maintenance or servicing
- Eliminates the need for clamps and levers
- Suitable for static and dynamic applications
- Simply move and release, and the position is held
- Convenient and ergonomic positioning of display, monitor or touchscreen.

Southco's proprietary Positioning Technology features integrated constant torque, providing the exact operating effort required to position displays. Engineers can define the desired user effort and know that this will be maintained throughout the product's lifetime.

The optimal ergonomics of these mounts allow the user to compensate for individual height differences or glare from light sources.

Key features

Southco offers a wide range of Monitor Mounts, with key features such as:

HEIGHT ADJUST

DUAL EXTENSION

TILT

TILT & SWIVEL

TILT, SWIVEL & SWING

From access hardware for the medical industry to touch points in RVs, aircraft and most types of marine craft, there are plenty of use cases for these mounts.

Whether your project prioritises low-profile design, heavy displays or easy folding, Southco has a mount to suit your needs.
